# Unitron's optical machine.

**The unique metallograph that combines brightfield, darkfield, polarized light, Nomarski interference contrast—all in one: the Versamet.®**

All four of the major illumination techniques used in metallurgy and metallography are built into this unique instrument – the versatile Unitron Versamet. Without installing or aligning attachments or accessories, you can use its self-contained single optical system for continuous-transition observation and photography by brightfield, darkfield, polarized light, and Nomarski interference contrast. You can observe through its ultra-widefield 10x eyepieces and planachromatic flatfield objectives – including a 100x that needs no oil-immersion technique. Switch instantly to 4" x 5" photography, or to 3¼" x 4¼" – Polaroid® as well as regular black-and-white and color films – or 35mm. A built-in photo cell is calibrated to give precise exposure data for various film formats when used with the exposure meter.

Despite its unique optical system, the Versamet is a pleasure to use. All low-positioned controls are within easy reach, and its inverted design automatically levels specimens on its large, unobstructed stage. Either a combination xenon-tungsten illuminator or 150W halogen illuminator assures bright images visually and short exposure photographically.

The ability to observe any image by brightfield, darkfield, polarized light, and Nomarski interference contrast – all in rapid succession – is a new experience. And it's a practical experience that often reveals new specimen details not seen previously by ordinary single methods of illumination.

Save space, save time, save effort with the versatile Versamet. For complete information or demonstration, contact:

## Contents

Volume 15, 1982

EDITORIAL . . . . . 1

H. Q. YE AND K. H. KUO (Shenyang, China)
Superposition of Electron Diffraction Patterns of Two Crystals with a Simple Lattice-Correspondence Relationship . . . . . 3

N. EL-MEHALLAWY, M. A. TAHA (Cairo, Egypt), AND S. R. SHATYNSKI (Troy, NY)
Morphological Observations of the Reaction Between Liquid Sn and Solid Pb 15

W. L. FONG AND D. O. NORTHWOOD (Ontario, Canada)
Identification of Second-Phase Particles in Zircaloy-4 Nuclear Fuel Sheathing 27

TERESA ESTELA PEREZ AND MARÍA EUGENIA SAGGESE (Buenos Aires, Argentina)
Welding Structures in Gas Tungsten Arc-Welded Zircaloy-4 . . . . . 43

B. N. BOOTS (Ontario, Canada)
The Arrangement of Cells in "Random" Networks . . . . . 53

P. D. SPILLING AND J. W. MARTIN (Oxford, England)
Precipitation of HfC in MM-002 . . . . . 63

A. R. MARDER AND A. O. BENSCOTER (Bethlehem, PA)
Quantitative Microanalysis of Dual-Phase Steels . . . . . 73

BOOK REVIEW . . . . . 87

INTERNATIONAL METALLOGRAPHIC EXHIBIT 1981 WINNERS . . . . . 89

ANNOUNCEMENTS . . . . . 97

ERRATUM . . . . . 103

I. W. HALL (Newark, DE)
Microstructural Effects of Ion Implantation on Molybdenum . . . . . 105

O. R. BERGMANN, N. F. BAILEY, AND H. B. COVERLY (Gibbstown, NJ)
Polishing Performance of Polycrystalline Diamond Produced by Expolsive Shock Synthesis . . . . . 121

M. C. ASKINS AND J. W. MARTIN (Oxford, England)
Structure and Strength of an Al–Zn–Mg Alloy After Duplex Aging Treatment . 141

O. J. GREGORY AND M. H. RICHMAN (Providence, RI)
Nitridation of High-Purity Single-Crystal Silicon . . . . . 157

S. MRIDHA AND D. H. JACK (Leeds, England)
Etching Techniques for Nitrided Irons and Steels . . . . . 163

MINORU UMEMOTO, KAZUMI MINODA, AND IMAO TAMURA (Kyoto, Japan)
Some Characteristics of the Substructure of Lenticular Martinsite in Fe–Ni–C Alloys . . . . . 177

D. B. Rayaprolu (London, England) and D. Jaffrey (Victoria, Australia)
Comparison of Discrete Particle Sectioning Correction Methods Based on Section Diameter and Area . . . . . 193

Book Review . . . . . 203

Book Corner . . . . . 205

Announcements . . . . . 207

Editorial . . . . . 211

M. Granovsky, M. Resta Levi, and D. Arias (Buenos Aires, Argentina)
Phase Transformations in $Ag_{48}Zn_{50}Au_2$ and $Ag_{48}Zn_{50}Cu_2$ Alloys . . . . . 213

D. S. Taylor (Gillingham, England) and G. Pollard (Leeds, England)
In Situ Observations of Diffusion Bonding Using a Photoemission Electron Microscope . . . . . 225

T. Tadaki and C. M. Wayman (Urbana, IL)
Electron Microscopy Studies of Martensitic Transformations in $Ti_{50}Ni_{50-x}Cu_x$ Alloys. Part I. Compositional Dependence of One-Third Reflections from the Matrix Phase . . . . . 233
Part II. Morphology and Crystal Structure of Martensites . . . . . 247

J. A. Little and K. H. Westmacott (Berkeley, CA)
The Origin of Unusual Dislocation Structures Observed in Ion-Thinned Nickel Oxide . . . . . 259

R. Brown and G. C. Smith (Cambridge, England)
Plastic Replication for the Identification of Fatigue Crack Initiation . . . . . 269

M. McNamee and J. G. Ashurst (Chesire, England)
Ultrafast Ceramographic Preparation of Sodium β Alumina . . . . . 281

L. Bendersky, M. Magen, and A. Rosen (Haifa, Israel)
Statistical Verification of the Use of Kikuchi Line Shift Techniques for Determining Subgrain Misorientation . . . . . 293

P.-H. Chang (East Chicago, IN), P. G. Winchell, and G. L. Liedl (West Lafayette, IN)
An Assessment of Stereological Techniques with Application to the Martensite Transformation . . . . . 309

Short Communication

M. Goldstein, A. Horowitz, M. Amit, and J. Makovsky (Beer-Sheva, Israel)
A Metallographic Investigation of Compositional Inhomogeneities in $Hg_{1-x}Cd_xTe$ Wafers . . . . . 323

Book Reviews . . . . . 331

Book Corner . . . . . 335

Announcements . . . . . 339

P. Deb and M. C. Chatuverdi (Winnipeg, Canada)
Coarsening Behavior of Cementite Particles in a Ferrite Matrix in 10B30 Steel . . . . . 341

Long-Sheng Li, Da-Zhi Yang, Guang-Sheng Wei (Dalian, China), and C. M. Wayman (Urbana, IL)
Structure and Properties of Low-Carbon High-Manganese Cast Steels for Cryogenic Use . . . . . 355

J. A. Wert (Thousand Oaks, CA) and W. M. Robertson (Washington, DC)
Determination of Crystallographic Facet Orientations on Fracture Surfaces . . 367
R. Deshmukh (Southfield, MI) and J. Gurland (Providence, RI)
Orientation of Contiguous Tungsten Carbide Crystals in Sintered WC–Co as Determined from Slip Line Traces . . . . . 383
F. H. Samuel (Dokki, Egypt) and A. A. Hussein (Giza, Egypt)
Tempering of Medium- and High-Carbon Martensites . . . . . 391
Glen R. Evers, Hugh H. Smith, and David J. Michel (Washington, DC)
Deformation Produced by Elevated Temperature Fatigue Crack Propagation in Type 316 Stainless Steel . . . . . 409

Announcement . . . . . 423

Author and Title Indexes for 1982 . . . . . 425

# ANNUAL BUEHLER TECHNICAL PAPER MERIT AWARD

sponsored by

## BUEHLER LTD.

in cooperation with the

## INTERNATIONAL METALLOGRAPHIC SOCIETY

An award of $1000.00 is presented annually to the author or cooperating authors submitting the technical paper judged best in dealing with the practice of the metallographic arts and accepted for publication in *Metallography*.

The judging committee will consist of an Editor from *Metallography,* an Officer of the International Metallographic Society, and a Member of the Research Staff of Buehler Ltd.

The fifth annual award will be presented at the 1982 IMS Technical Meeting. All papers submitted and accepted for publication in *Metallography* beginning with the January 1981 issue will be eligible.
